SAFETY DATA SHEET

N/Ap:	Not applicable.	
N/Av:	Not available.	
N/D:	Not determined.	
NDSL:	Canadian Non-Domestic Substances List.	
NIOSH:	National Institute for Occupational Safety and Health.	
OSHA:	Occupational Safety and Health Administration, US Department of Labor.	
REL:	A recommended exposure limit (REL) is an occupational exposure limit that has been	
	recommended by the United States National Institute for Occupational Safety and Health to	
	the Occupational Safety and Health Administration (OSHA) for adoption as a permissible	
	exposure limit.	
RTECS:	Registry of Toxic Effects of Chemical Substances.	
SARA:	Superfund Amendments and Reauthorization Act.	
STEL:	A short-term exposure limit (STEL) is the acceptable average exposure over a short period	
	of time, usually 15 minutes as long as the time-weighted average is not exceeded.	
TDGR:	Transportation of Dangerous Goods Regulations.	
TLV:	The threshold limit value of a chemical substance is a level to which it is believed a worker	
	can be exposed day after day for a working lifetime without adverse health effects. Strictly	
	speaking, TLV is a reserved term of the American Conference of Governmental Industrial	
	Hygienists (ACGIH). However, it is sometimes loosely used to refer to other similar	
	concepts used in occupational health and toxicology. TLVs, along with biological exposure	
	indices (BEIs), are published annually by the ACGIH.	
TSCA:	Toxic Substances Control Act.	
TWA:	A time-weighted average is used to calculate a workers daily exposure to a hazardous	
	substance (such as chemicals, dusts, fumes, mists, gases, or vapors) or agent (such as	
	occupational noise), averaged to an 8-hour workday, taking into account the average levels	
	of the substance or agent and the time spent in the area. This is the guideline OSHA uses to	
	determine permissible exposure limits (PELs) and is essential in assessing a worker's	
	exposure and determining what protective measures should be taken.	
UN:	United Nations.
